## RAZIONALE

The aim of the Workshop is to exchange the state-of-the-art information and to present the most recent advances on the diagnosis and treatment of cardiac arrhythmias.

The Scientific program is developed within 2 days, with one practical session on pacemaker implantation and 3 hands-on sessions on CRT implantation, trans-septal puncture, and atrial fibrillation mapping and ablation. For each hands-on session, 6 stations will be arranged: every participant will remain for 3 hours on each hands-on session, where simulation devices will be available.

This year, the Workshop will especially focus on the following topics:

atrial fibrillation trans-catheter and hybrid ablation, CRT leads evolution, S-ICD, lead extraction and device infection, lead-less cardiac pacing. These topics will be discussed by some of the most worldwide recognized leaders.

The meeting will be characterized by open-mic live sessions, where all the attendants could brush-up all their doubts
